Customer Journey

PENNYGRADE | RAZORPAY MERCHANT READINESS PREPARATION

DRAFT - Internal preparation document. Not proof of approval, registration, signed partnership, issued card, or customer transaction.

Purchase

Customer reviews membership product, price, delivery coverage, membership/refund terms and enters name, email, mobile and delivery address. Current source validates format; it does not perform OTP verification.

Payment and activation

Server creates the payment order using the active plan and confirmed card inventory. Payment callback/webhook is checked server-side; successful verification triggers atomic card assignment and membership activation. Order/payment reference is retained.

Fulfilment

Confirmation is sent through configured email workflow; operations prepare and dispatch/hand over the physical card; dispatch and tracking details are entered by an operator; customer can use order tracking.

Use and support

Member explores eligible public listings, presents card, obtains live online verification, and pays the partner directly. Membership/order issues go to published support contacts. Email consent and notification preferences require operational confirmation.

Before external submission: verify every stated fact against current operations and business records. Razorpay and qualified legal/tax advisers make their own determinations.
